According to our (Global Info Research) latest study, the global Explosion Protection Testing Service market size was valued at US\$ 626 million in 2025 and is forecast to a readjusted size of US\$ 1004 million by 2032 with a CAGR of 7.1% during review period.

Explosion Protection Testing Service is a professional safety verification service conducted in accordance with international and regional core explosion protection standards for equipment, materials, and systems used in flammable and explosive environments. Its core function is to simulate potential explosion scenarios involving flammable media such as dust and gas, using specialized equipment to test the explosion-proof performance and safety reliability of products. Key test content covers indicators such as explosion-proof structural integrity, flameproof gap sealing, temperature class compatibility, anti-static capability, and spark suppression effect. It also verifies whether the equipment will become an ignition source for an explosion under fault or extreme operating conditions.

The Explosion Protection Testing Service industry is accelerating its transformation towards intelligent and digital testing. Many leading institutions have introduced automated testing platforms and remote monitoring systems to achieve real-time data collection and analysis for key processes such as temperature rise testing, impact testing, and explosion-proof enclosure pressure resistance testing. With the development of the new energy industry, new explosive environments such as lithium battery production workshops and hydrogen fuel storage stations are constantly emerging, creating new demands for explosion-proof testing services. Simultaneously, testing standards for these emerging application scenarios are also being improved. As the government continues to strengthen its safety production supervision and

regulations, standards are constantly being upgraded, and companies' demand for explosion-proof testing services has gradually shifted from passive compliance to proactive risk management.
