## Abstracts

The global Extended Range Electric Vehicle market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The extended-range electric vehicle (E-REV) is effectively an all-electric vehicle, with all the motive power provided by an electric motor, but with a small ICE present to generate additional electric power. When the battery is discharged to a specified level, the ICE is switched on to run a generator that, in turn, supplies power to the electric motor and/or recharges the battery. With this arrangement, the range limitation that is inherent in a BEV can be overcome. For moderate distances, E-REVs can operate in full-electric mode and are then as clean and energy-efficient as BEVs (unlike parallel hybrids and other series hybrids with their smaller batteries and very limited electric range). For longer distances, E-REVs utilize the ICE to keep the battery charged.

This report studies the global Extended Range Electric Vehicle production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Extended Range Electric Vehicle, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
