The global External Counterpulsation Therapy Device market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

External Counterpulsation (ECP) Therapy is a non-invasive medical treatment used primarily for angina and certain heart conditions. The therapy involves the use of a specialized device known as an External Counterpulsation Therapy Device.

External Counterpulsation (ECP) is a therapeutic technique that involves the application of pressure cuffs or pneumatic cuffs around the lower extremities (usually the legs). The cuffs are inflated and deflated in sync with the cardiac cycle, exerting pressure on the arteries of the lower limbs. The purpose of this therapy is to increase blood flow to the heart and improve overall circulation, especially to the coronary arteries.
