According to our (Global Info Research) latest study, the global External Mold Release Agents market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Mold Release Agents are applied on the molds of castings to prevent the materials inside the molds from sticking to the mold surface. They form a layer between the cast product and the mold, thereby facilitating easy removal of materials from the mold without damaging the shape of the cast material. External mold release agents stick to the external surface of the article that has been cast. External mold release agents are sacrificial in nature. This implies that the external mold release agent is removed from the surface of the mold upon every application. This necessitates the reapplication of external mold release agents in order to ensure easy release of every cast article from the mold.
