Abstracts

The global External Nasal Dilator market size is expected to reach \$ 886 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

An External Nasal Dilator (END) is basically a strip of adhesive tape with two parallel layers of plastic. Going from one nasal wing to the other, and acting as a spring, the goal of such strips is to prevent nasal wings from collapsing and closing during breathing.

The external nasal dilator market is primarily driven by the growing awareness of sleep-related breathing disorders, such as snoring and obstructive sleep apnea (OSA). External nasal dilators provide a non-invasive solution to improve nasal airflow, making them popular among individuals seeking to reduce snoring or enhance breathing during sleep and physical activities. The rising incidence of respiratory issues, coupled with an increasing focus on overall health and wellness, has also boosted demand. Moreover, these dilators are widely used by athletes to enhance breathing efficiency during exercise, further driving market growth.

A key challenge in the external nasal dilator market is the competition from alternative treatments and devices, such as CPAP machines, nasal sprays, and surgical interventions for more severe cases of sleep apnea or nasal obstruction. While external nasal dilators are effective for mild conditions, they may not offer sufficient relief for individuals with more complex respiratory issues. Additionally, some users may experience discomfort or find the device ineffective over time, leading to reduced long-term adherence. This can limit market penetration, particularly among those seeking more permanent or comprehensive solutions to breathing difficulties.

Global core external nasal dilator manufacturers include TGSK, Equate (Walmart) etc. The top 1 company holds a share of about 70%.

This report studies the global External Nasal Dilator production, demand, key manufacturers, and key regions.
