According to our (Global Info Research) latest study, the global Extra Low Carbon Ferrochrome market size was valued at US\$ 2416 million in 2025 and is forecast to a readjusted size of US\$ 3488 million by 2032 with a CAGR of 5.4% during review period.

In 2025, global ultra low carbon ferrochrome production reached approximately 810 kilotons, the average price is 2900 usd/ton. Ultra-low carbon ferrochrome is an iron alloy mainly composed of chromium and iron, and its core feature is to control the carbon content at an extremely low level. This makes it different from low-carbon ferrochromium (C ? 0.50%), micro-carbon ferrochromium (C ? 0.15%) and other categories, belonging to the highest requirements, the most difficult to smelt one of the refined ferrochromium.

The annual production capacity of a single ultra low carbon ferrochrome production line is typically 50,000-60,000 tons/year, with a gross profit margin of around 28%.
