## Abstracts

According to our (Global Info Research) latest study, the global Extra-thick Crack Arrest Steel Plate market size was valued at US\$ 535 million in 2024 and is forecast to a readjusted size of USD 758 million by 2031 with a CAGR of 5.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Crack resistant steel plate refers to steel plates that have the ability to prevent high-speed crack propagation. Extra thick steel plate usually refers to steel plates with a thickness greater than 50mm but not greater than 100mm.

The large-scale development of container ships will drive the demand for crack arrest steel. The development of global trade has driven the continuous increase of maritime cargo transportation volume. In order to pursue higher ship transportation efficiency, container ships are constantly developing towards large-scale and ultra large sizes. Starting from the construction of the first generation of container ships in the mid-1960s, after only 50 years of development, container ships have grown from a few hundred TEUs to over 20000 TEUs today, and may even develop into super container ships of 30000 TEUs. The emergence of ultra large container ships not only brings huge opportunities and challenges to the market, construction, environmental protection, port construction, etc., but also poses a series of challenges to shipbuilding materials and welding technology, and puts forward higher requirements for the selection of construction materials and ship safety. Brittle fracture of materials will lead to accidents on large container ships. The application of extra-thick crack arrest steel plates will

effectively prevent such situations from occurring, so the large-scale container ships will drive the market demand for extra-thick crack arrest steel plates in container ships.

Previously, the extra-thick crack arrest steel plates for container ships market was mainly monopolized by steel companies in Japan, South Korea, and other countries. In recent years, with the successful development of high-strength crack arrest steel by major domestic steel mills such as Baosteel, Ansteel, Nanjing Iron and Steel, and Xiangtan Iron and Steel, China has surpassed in the field of anti cracking steel for large container ships and become the world's number one.
