## Abstracts

According to our (Global Info Research) latest study, the global Extracorporeal Shock-wave Lithotripsy (ESWL) market size was valued at US\$ 432 million in 2025 and is forecast to a readjusted size of US\$ 605 million by 2032 with a CAGR of 5.0% during review period.

Extracorporeal shock wave lithotripsy (ESWL) is a non-invasive treatment for kidney and gallstones. Its main principle is to use extracorporeal shock waves to break up kidney stones. Stones between 4 mm (0.16 inches) and 2 cm (0.8 inches) in diameter are most commonly treated with ESWL, with a shock frequency of 60-90 times per minute for optimal stone fragmentation. The ESWL machine is the core equipment for non-invasive stone treatment, and its classification is mainly based on the energy source and positioning method, with applications concentrated in urology. The product has an average price of approximately \$90,000 and global sales of approximately 4,669 units.

The upstream of the extracorporeal shock wave lithotripsy (ESWL) industry chain mainly includes high-energy shock wave generators (electrohydraulic, electromagnetic, piezoelectric), image positioning systems (X-ray/ultrasound), and medical-grade materials and components, such as high-voltage power supplies, focusing lenses, and ultrasound probes, which determine the accuracy and reliability of the equipment. Downstream applications include general hospitals, urology hospitals, outpatient lithotripsy centers, and some extended applications in bile duct stones and rehabilitation medicine (musculoskeletal shock wave therapy). Future development trends focus on dual-mode positioning (X-ray + ultrasound), low-energy multiple shocks to reduce tissue damage, and intelligent lithotripsy monitoring systems. Simultaneously, with the rising

incidence of stones, an aging population, and increased demand for non-invasive treatments, the market will maintain stable growth. The construction of commercial aerospace medical and regional lithotripsy centers will also drive the miniaturization and mobility of equipment, making it more suitable for primary healthcare institutions.
