Abstracts

The global Extracorporeal Shock Wave Lithotripsy Machine market size is expected to reach \$ 605 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Extracorporeal shock wave lithotripsy (ESWL) is a non-invasive treatment of kidney stones and gallbladder stones. Major principle behind the treatment is breaking of the kidney stones by passing shock waves from outside the body targeted at kidney stones. Stones that are between 4 mm (0.16 in.) and 2 cm (0.8 in.) in diameter are most likely to be treated with ESWL used at rate of 60-90 shocks/minute to achieve optimal stone fragmentation. ESWL is usually not used if you: Are pregnant. The sound waves and X-rays may be harmful to the fetus./Have a bleeding disorder./Have a kidney infection, urinary tract infection, or kidney cancer./Have kidneys with abnormal structure or function. Extracorporeal shock wave lithotripsy (ESWL) is a core device for non-invasive stone treatment. Its classification is mainly based on energy source and positioning method, and its application is concentrated in urology. The product has an average price of approximately \$90,000 and global sales of approximately 4,669 units.

The upstream of the extracorporeal shock wave lithotripsy (ESWL) industry chain mainly includes high-energy shock wave generators (electrohydraulic, electromagnetic, piezoelectric), image positioning systems (X-ray/ultrasound), and medical-grade materials and components, such as high-voltage power supplies, focusing lenses, and ultrasound probes. These determine the accuracy and reliability of the equipment. Downstream applications include general hospitals, urology hospitals, outpatient lithotripsy centers, and some extended applications in bile duct stones and rehabilitation medicine (musculoskeletal shock wave therapy). Future development trends focus on dual-mode positioning (X-ray + ultrasound), low-energy multiple shocks to reduce tissue damage, and intelligent lithotripsy monitoring systems. Simultaneously, with the rising

incidence of stones, an aging population, and increased demand for non-invasive treatments, the market will maintain stable growth. The construction of commercial aerospace medical and regional lithotripsy centers will also drive the miniaturization and mobility of equipment, making it more suitable for primary healthcare institutions.
