Abstracts

The global Extracorporeal Suction Connecting Tube market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

With the aging of the population, the increase in patients with chronic diseases, and the improvement of medical standards, the number of patients requiring ventilation therapy is constantly increasing. This has led to an increase in the demand for extracorporeal suction connections.

The extracorporeal suction connecting tube consists of a machine connector, an extension tube, a water accumulation cup, a compliant bag (applicable to Type II) and a conversion joint. The drainage catheter and the drainage device can be connected to form a closed drainage device. Not in direct contact with the human body, non-sterile (if used in a sterile environment, it should be sterilized before use), and disposable.

This report studies the global Extracorporeal Suction Connecting Tube production, demand, key manufacturers, and key regions.
