An extractive oxygen analyzer is a device that measures the oxygen concentration in a gas sample by extracting the sample for analysis. It is widely used in industrial process control, environmental monitoring, and safety management. This analyzer conditions and analyzes the extracted gas sample to provide precise oxygen concentration measurements, making it suitable for high-temperature, high-pressure, or corrosive environments. The extractive design ensures accurate oxygen readings in complex conditions and is commonly used for combustion control, flue gas monitoring, and applications where strict oxygen control is required.
