According to our (Global Info Research) latest study, the global Extraoral Dental X-ray System market size was valued at USD 1807.5 million in 2023 and is forecast to a readjusted size of USD 2539.3 million by 2030 with a CAGR of 5.0% during review period.

Extraoral X-rays show teeth, but their main focus is the jaw and skull. These X-rays do not provide the detail found with intraoral X-rays and therefore are not used for detecting cavities or for identifying problems with individual teeth. Instead, extraoral X-rays are used to look for impacted teeth, monitor growth and development of the jaws in relation to the teeth, and to identify potential problems between teeth and jaws and the temporomandibular joint or other bones of the face.

The dental digital X-ray market is experiencing strong growth due to advantages such as faster image acquisition, improved image quality, lower radiation exposure, and efficient patient record management. The increasing prevalence of dental disorders and technological advancements are driving the adoption of digital X-ray systems in dental clinics and hospitals worldwide. North America, Europe, and Asia-Pacific are key regions in this market. The integration of artificial intelligence and 3D imaging capabilities further enhances the growth potential of the dental digital X-ray market.
