Abstracts

The global Extruded Dog Foods market size is expected to reach \$ 68180 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032). In 2025, global production of extruded dog foods is estimated at approximately 32.6 million tons, with an average selling price of about USD 1,480 per ton. Extruded dog food is a dry dog food produced through high-temperature and high-pressure extrusion processing, using meat ingredients, grains or tubers, fats, and functional additives as core components. It features uniform structure, stable palatability, controlled nutrient distribution, long shelf life, and high suitability for large-scale industrial manufacturing. Typically formulated to meet complete and balanced nutritional standards, extruded dog food represents the most widely used, highest-volume, and most extensively distributed product form in the global dog food market.

From a market perspective, extruded dog food has long dominated the dog food market, serving as the core product category in mid-range and mass-market segments, while also acting as the foundational platform for functional and premium upgrades by leading brands. As pet ownership becomes more refined, growth in low-priced extruded products has slowed, whereas high-meat-content formulas, grain-free recipes, and function-oriented products targeting digestion, weight management, and skin and coat health continue to gain share. Industry trends indicate ongoing optimization of extrusion technology toward higher nutrient retention, lower processing losses, and more precise functional inclusion. Market consensus suggests that although air-dried, freeze-dried, and low-temperature baked dog foods are expanding more rapidly, extruded dog food will remain the backbone of the global dog food market due to its cost efficiency, supply stability, and scalability.

This report studies the global Extruded Dog Foods production, demand, key manufacturers, and key regions.
