According to our (Global Info Research) latest study, the global Extruded Magnetic Strip market size was valued at US\$ 674 million in 2024 and is forecast to a readjusted size of USD 912 million by 2031 with a CAGR of 4.4% during review period.

Extruded magnetic strip is made by mixing magnetic powder with appropriate binder, plasticizing at high temperature and forming into continuous strip products by extruder. The extrusion process ensures uniform distribution of magnetic particles and imparts specific physical properties and shapes to the magnetic strip. Depending on the requirements, different additives can be added to the gypsum during extrusion to improve its properties, such as increasing weather resistance, UV resistance or reducing temperature sensitivity.
