## Abstracts

The global Extruded Pet Food Products market size is expected to reach \$ 116917 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

In 2025, global output reached 28.5 million tons, with an average selling price of USD 2.6 per kg, total production capacity of 32 million tons, and a gross margin of 32%.

Extruded pet food products are pet foods manufactured from cereals, meat and by-products, plant proteins, fats, vitamins, and minerals using high-temperature and high-pressure extrusion technology. They are typically produced as dry or semi-moist products and are characterized by uniform nutrition, stable structure, and long shelf life, making them the dominant form of staple food for dogs and cats.

From a global perspective, demand for extruded pet food continues to grow, driven by rising pet ownership, pet humanization, and premiumization of pet food consumption. North America and Europe remain the most mature markets, with a strong focus on branded, functional, and premium products, while the Asia-Pacific region—particularly China and Southeast Asia—shows the fastest growth, supported by expanding production capacity and the parallel development of private-label and branded products.

This report studies the global Extruded Pet Food Products production, demand, key manufacturers, and key regions.
