According to our (Global Info Research) latest study, the global Extruded Rubber Parts market size was valued at US\$ 1601 million in 2025 and is forecast to a readjusted size of US\$ 2373 million by 2032 with a CAGR of 5.8% during review period.

Extruded rubber parts are functional components such as sealing strips, edge protectors, cushioning pads, O-rings, and tubing manufactured by processing natural or synthetic rubber through extrusion equipment. Widely used in automotive sealing systems, architectural door and window seals, home appliance vibration and noise reduction, industrial machinery cushioning, and pipeline sealing, these parts are characterized by high elasticity, wear resistance, aging resistance, and excellent sealing performance.

Upstream operations primarily involve suppliers of raw materials such as Nitrile Rubber (NBR), Hydrogenated Nitrile Rubber (HNBR), silicone rubber, EPDM rubber, fillers, and additives; downstream products are mainly supplied to automotive manufacturers, door and window companies, home appliance manufacturers, and industrial equipment makers. Market demand continues to grow, driven by trends such as automotive lightweighting and the adoption of new energy vehicles, stricter building energy-efficiency standards, and the intelligent upgrading of home appliances and industrial equipment. Future product development will focus on high temperature and chemical resistance, complex cross-sectional designs, and smart manufacturing processes; meanwhile, significant business opportunities will arise from the upgrading of automotive sealing systems, energy-efficiency retrofitting for buildings, and the demand for customized industrial rubber components.
