According to our (Global Info Research) latest study, the global Extruder Screw market size was valued at US\$ 165 million in 2025 and is forecast to a readjusted size of US\$ 222 million by 2032 with a CAGR of 4.4% during review period.

The extruder screw is a key mechanical component developed to address the core technological challenge of efficiently transforming solid polymer raw materials into homogeneous, stable, and continuous melts, while achieving precise conveying and pressurization. It is a long metal shaft with continuous helical channels (threads) on its surface, rotating within a heated barrel. Its core function is to transfer mechanical energy (rotational shearing) and thermal energy (barrel heating) to the material through geometric design, causing it to undergo three continuous physical state changes: 'solid conveying ? melt plasticizing ? homogenization and metering.' Ultimately, it extrudes the material from the die head at a stable and uniform pressure and flow rate, forming a continuous product with the desired cross-sectional shape. The demand directly stems from the downstream continuous extrusion molding industries, such as plastics, rubber, and food, which seek efficient, stable, and high-quality production. The upstream sector primarily includes suppliers of special alloy steel and wear-resistant materials (providing screw blanks, such as 38CrMoAlA and powder metallurgy high-speed steel), as well as precision machining equipment and coating service providers. The downstream sector covers almost all areas requiring continuous extrusion molding, mainly including plastic products (such as pipes, profiles, and films), rubber products, food processing (such as noodles and puffed foods), and end-user industries such as 3D printing consumables production. In 2025, the extruder screw production is projected to reach approximately 80,000 units, with an average price of approximately US\$2,000 per unit, a gross profit margin of approximately 35%, and a single-line capacity of 1,000 units per year.
