According to our (Global Info Research) latest study, the global Extrusion Machinery market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The process used to create objects of a uniform cross-sectional profile is known as extrusion. The material to be extruded is pushed through a die of the desired cross-section. The extrusion process may be semi-continuous as well as the continuous process. It can be carried out on hot as well as cold materials. Some commonly extruded materials include metals, polymers, concrete, ceramics, and foodstuffs.

The single screw extrusion machines market segment accounted for the maximum market share and will continue to dominate the global market for the next four years. Some of the beneficial characteristics of single screw extrusion machines are that they are ideal for the extrusion processing of less complex ingredients and small-scale production, exhibit short life, produce high heat using friction, and show low adaptability.

The Global Info Research report includes an overview of the development of the Extrusion Machinery industry chain, the market status of Plastic Processing (Single Screw Extruders, Twin Screw Extruders), Food and Pharmaceutical (Single Screw Extruders, Twin Screw Extruders), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Extrusion Machinery.

Regionally, the report analyzes the Extrusion Machinery markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives
