Abstracts

The global F-Class Target Rifle Scope market size is expected to reach \$ 85.12 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

In 2025, global sales of F-Class Target Rifle Scopes are estimated at 38,700 units, with an average price of approximately USD 1,520 per unit and an industry-wide gross profit margin of around 30%. The F-class target rifle scope is a high-precision long-range aiming optical device designed specifically for the F-Class Target Rifle (F-TR) shooting competition. It is mainly used in competition scenarios using small-caliber rifles such as .308 Winchester or .223 Remington and equipped with a bipod. This type of scope usually has a variable magnification range between 20x and 50x, a large-caliber objective lens (such as 50mm or more), and supports high-precision adjustment functions of MOA or MRAD units, such as 1/8 MOA windage and elevation scales. The F--class target rifle scope emphasizes accuracy, tracking stability, and good parallax control to cope with precision shooting requirements up to 1,000 yards. Compared with the F-Open scope, the F--class target rifle scope pays more attention to weight control and clarity performance in the medium magnification segment. It is adapted to standardized weapon platforms and is a core component in F-Class competitions that requires extremely high accuracy and consistency.

From a market development perspective, F-Class Target Rifle Scopes occupy a niche professional market that is not large in scale but is constantly being upgraded, with relatively high unit prices and profit margins. On one hand, the mature F-Class competition system and shooting clubs in Europe, America, South Africa, Australia and other regions provide stable demand, and the replacement and upgrade of new beginners and experienced shooters support the base of mid-to-high-end products. On

the other hand, the culture of long-range precision shooting, self-loading and long-range hunting continues to grow in North America and some European countries, which is also driving some F-Class specification scopes to spill over into hunting and target shooting scenarios and 'PRS/long-range target shooting' scenarios, prompting brands to make more segmentation in terms of reticle design, adjustment travel and weight control. In terms of technology, high-end products are iterating around larger adjustment travel, more precise clicks, higher transmittance and chromatic aberration control, and more reliable mechanical zero-position holding. They are also introducing error-proof locking, tool-based zero-position recording, and even interface adaptation with ballistic calculation/rangefinding equipment to improve practical stability in complex wind conditions and multi-site competitions. Mid-range products are capturing the growing number of entry-level and advanced users by bringing 'competition-grade reticle + competition-usable adjustment travel' to a more affordable price point. Overall, while the sales growth rate of F-class target rifle scopes is not as high as that of mass-market hunting scopes, the trend of high-end sports shooting equipment budgets shifting towards 'optics + ballistic systems' is expected to drive up ASP and unit added value. The market structure will maintain its niche, high-margin characteristic of 'a few high-end European/American/Japanese brands dominating + several mid-priced brands supplementing.'
