Abstracts

The global FA Fixed Focal Lens market size is expected to reach \$ 4168 million by 2032, rising at a market growth of 5.6% CAGR during the forecast period (2026-2032).

FA fixed focal lens refers to a fixed focal length optical lens used in industrial automation vision systems, designed specifically for machine vision cameras. The focal length remains unchanged during use and imaging is achieved by adjusting the working distance. It has the characteristics of simple structure, stable imaging, high consistency, low distortion, and strong resolution matching. It is widely used in size measurement, defect detection, positioning and recognition, and is the most basic and widely used lens type in machine vision systems. In 2025, global FA Fixed Focal Lens production reached approximately 7.61 M Units, with an average global market price of around US\$ 364 per Unit. The annual production capacity of FA fixed focal lens is 10 M Units, with a gross profit margin of around 25%.

In terms of cost structure, it mainly consists of optical raw material costs, processing and manufacturing costs, assembly and testing costs, and R&D expenses. Among them, optical glass and lens materials account for about 25% to 35%, precision processing and coating account for about 20% to 30%, assembly and testing account for about 15% to 25%, and R&D and design expenses account for about 10% to 20%.

The upstream of the industrial chain mainly includes optical glass and crystal material suppliers, coating material manufacturers, precision machining equipment and mold manufacturers, the midstream is FA lens design and manufacturing enterprises, and the downstream includes machine vision system integrators, industrial camera manufacturers, and end application industries such as semiconductor equipment, panel manufacturing, lithium battery production lines, automotive automation production lines,

and intelligent manufacturing system integration. The overall industrial chain presents a technology intensive feature, and downstream demand is highly dependent on manufacturing automation upgrades.
