Abstracts

Fabric solar shading systems can be utilised as vertical feature fins or alternatively as a horizontal canopy system, both of which are bespoke systems designed to a given specification. Solar shade fabric fights solar heat gain on several fronts: openness of weave, color of the fabric, and innovative reflective material.

Solar shading systems in global have always been a concept of ambiguity and boundaries. In the market, there are three categories manufacturer that claim to be manufacturers of solar shading systems. Some manufacturers only produce sunshade fabrics. Some manufacturers are able to produce simple sunshade products such as sunshades. There is also a part of manufacturing that is a shade fabrics integrator. The integrator's sunshade products consist of sunshade fabrics, electromechanical equipment, and control systems. Solar shading systems can be controlled manually or electrically. Report data only covers data from system integrators. In addition, the report mainly deals with systematic products, but the scope of the report does not cover traditional electric curtains and blinds.

According to our (Global Info Research) latest study, the global Fabric Solar Shading Systems market size was valued at US\$ 1127 million in 2023 and is forecast to a readjusted size of USD 1599 million by 2030 with a CAGR of 5.2% during review period.
