The global Face Bow Brace market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A facial bow brace is a device used in orthodontic treatment, usually made of metal or plastic, to adjust the position of the teeth and jaw. Facial Bow Braces improve the bite and facial appearance by fitting the Bow Brackets between the teeth and jaws, applying the right amount of pressure to adjust the position of the teeth and jaws. In orthodontic treatment, facebow braces are often used in conjunction with other orthodontic devices such as braces, springs, attachments, etc. By cooperating with other orthodontic devices, the facial arch bracket can help adjust the position of teeth, control the growth direction of teeth, adjust the position of jaws, etc., to achieve the purpose of restoring teeth and facial appearance. Facial bow braces generally require regular adjustments to ensure the effectiveness of orthodontic treatment. When using the facial arch bracket, you need to pay attention to oral hygiene, brush your teeth regularly, use dental floss and mouthwash, to avoid food residues and bacterial growth, which will affect the effect of orthodontic treatment.
