The global Facial Import Instrument market size is expected to reach \$ 3738 million by 2032, rising at a market growth of 16.0% CAGR during the forecast period (2026-2032).

In 2025, global facial import instrument production reached approximately 12,200,000 units. Facial import instrument is a kind of electronic beauty equipment used to boost the absorption of skin care ingredients, improve skin condition and implement beauty care. It mainly adopts technologies such as iontophoresis, ultrasound, radio frequency, microcurrent and LED phototherapy to efficiently deliver essences, nutrients and functional skin care substances into deep skin layers, so as to achieve the effects of moisturizing, skin firming and lifting, skin texture improvement, fine line reduction and skin repair promotion. Equipped with energy adjustment systems, multi-functional care modes and various treatment probes, this device can realize personalized beauty care according to different skin types and care demands, and is widely used in beauty salons, skin management centers, medical beauty institutions and household skin care scenarios. With the growing consumer demand for scientific skin care and refined skin management, modern facial import instruments are gradually developing towards intelligence, multi-functionality and portability. New-generation devices are commonly integrated with intelligent induction, constant temperature control and multi-mode energy combination technologies to improve the penetration efficiency of skin care ingredients and optimize user comfort. Meanwhile, products combined with APP connection, skin detection analysis and customized care plans are gaining increasing popularity, which further expands the application scope of facial import instruments in daily skin care, anti-aging care, sensitive skin repair and comprehensive skin management.

The facial infusion device market has maintained steady growth in recent years, driven

by increasing demand for scientific skincare, home-use beauty devices, and skin management treatments. As an important device for skincare ingredient infusion, skin hydration, and basic anti-aging care, facial infusion devices are widely used in beauty salons, skin management centers, medical aesthetic clinics, and personal home skincare applications. They are commonly applied for serum infusion, deep hydration, skin tightening, skin texture improvement, and restorative skincare treatments.

With consumers placing greater emphasis on convenience, personalization, and efficient skincare, demand continues to rise for products with high infusion efficiency, multiple treatment modes, operational safety, and strong portability. Meanwhile, device technologies are evolving toward multifunctional integration of ion infusion, ultrasound, microcurrent, radio frequency, LED light therapy, and intelligent skin analysis functions, further driving the expansion of the mid-to-high-end facial infusion device market. In the future, the market is expected to maintain stable growth, while industry competition will increasingly focus on infusion effectiveness, operational safety, skin compatibility, product intelligence, portable design, and brand service capabilities.
