## Abstracts

According to our (Global Info Research) latest study, the global Facial Injectable Fillers market size was valued at USD 3292.6 million in 2022 and is forecast to a readjusted size of USD 5382.5 million by 2029 with a CAGR of 7.3% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In the current scenario, the demand for cosmetic procedures has been strong and continues to grow, especially non-invasive cosmetic procedures such as facial fillers. These are gel-like substances that are injected under the skin of the face for cosmetic results. Some dermal filler applications are facial line correction, wrinkle correction, volume reduction restoration, lip enhancement, and acne scarring. These procedures are expected to increase in procedure volume with rising disposable income globally, especially in emerging regions. Additionally, growing awareness of filler surgery has significantly reduced the contraindications associated with cosmetic surgery. This change in attitude is expected to significantly lead to the adoption of these products. Facial injectable fillers, also known as dermal fillers or soft tissue fillers, are cosmetic products that are injected into the skin to restore volume, enhance facial contours, and reduce the appearance of wrinkles, fine lines, and other signs of aging. They are commonly used in cosmetic dermatology and aesthetic medicine to provide temporary or semi-permanent improvements to facial appearance.
