A factory cooling water filtration system is a specialized filtration and water treatment unit installed in an industrial cooling water circulation system. It removes and controls suspended particles, silt, rust, algae, biological slime, and some oil contaminants from the cooling water, ensuring the long-term, efficient operation of heat exchange equipment (cooling towers, plate heat exchangers, condensers, mold temperature controllers, cooling water pipelines, etc.). It typically consists of a filter body (cartridge type, sand filter, disc type, screen type, etc.), piping, valves, pressure gauges, an automatic backwashing mechanism, and a control system. It can be integrated into the factory cooling water system as a side-channel filtration system or a main loop filtration unit. The average price of this product is approximately US\$1200 per unit, with global sales of approximately 540,000 units.
