Abstracts

The global Factory Forklift Collision Prevention System market size is expected to reach \$ 1990 million by 2032, rising at a market growth of 9.3% CAGR during the forecast period (2026-2032).

The factory forklift collision avoidance system (also known as forklift safety assistance system, forklift collision warning device or intelligent forklift obstacle avoidance system) is an intelligent safety system that uses sensors, cameras, UWB positioning or AI algorithms to be installed on forklifts, detects personnel and obstacles in real time, and emits sound and light alarms, and even achieves automatic braking. It can effectively solve the problems of 'blind spots', 'fatigue driving' and 'limited field of view' during forklift operations through ultrasonic, LiDAR or ultra wideband technology, greatly reducing the rate of human-machine accidents. It is mainly used in logistics warehouses, production workshops and other areas.
