Factory Life Extension Service refers to a professional technical service that uses systematic assessment, technological transformation, and intelligent upgrades to reliably and economically extend the service life of industrial production facilities that have reached or are nearing their design life, while ensuring safety, efficiency, and compliance. This service is based on a comprehensive health diagnosis and remaining life assessment of the plant structure, core production lines, power systems, and environmental protection facilities to identify equipment aging, technological obsolescence, and compliance risks. By implementing key equipment upgrades, process optimization, automation and digital transformation (such as the installation of IoT monitoring and predictive maintenance systems), and energy-saving and environmental upgrades, the ultimate goal is to improve production efficiency, reduce operating costs, and meet modern production standards and regulatory requirements, thereby maximizing the value of existing assets and postponing substantial reconstruction investments.
