## Abstracts

According to our (Global Info Research) latest study, the global Failure Analysis and Technical Analysis market size was valued at US\$ 681 million in 2025 and is forecast to a readjusted size of US\$ 963 million by 2032 with a CAGR of 5.1% during review period.

Failure analysis services are a systematic engineering and technical service designed to identify the root causes and precise mechanisms of product, material, or component failures through scientific detection, testing, and logical reasoning. It integrates knowledge from multiple disciplines, including materials science, electronic engineering, mechanics, and chemistry, utilizing precision instruments such as metallographic analysis, electron microscopy, energy dispersive spectroscopy, and thermal analysis to conduct a comprehensive "diagnosis" of failed components from macroscopic to microscopic levels. Its core value lies not only in tracing responsibility but also in providing precise data support and decision-making basis for improving design, processes, materials, and maintenance. It is a crucial link in enhancing product reliability, ensuring safety, and preventing recurrence of problems.

Its prospects are extremely broad, driven by industrial upgrading, a commitment to quality, and technological innovation. The core trend lies in intelligence and foresight: on the one hand, AI and big data will be deeply integrated into the analysis process, enabling automatic failure mode identification, intelligent root cause correlation, and reliability prediction, significantly improving efficiency and accuracy; on the other hand, the service focus will extend from "post-event diagnosis" to "pre-event prevention" and "in-event monitoring," deeply integrating with digital R&D, online monitoring, and health management. With the popularization of new materials, new processes and complex

systems, the demand for interdisciplinary and high-precision failure analysis will explode, driving the field toward specialization, platformization and strategic development.
