## Abstracts

According to our (Global Info Research) latest study, the global Fall Detection Radar Sensors market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Fall Detection Radar Sensor is based on the millimeter-wave Doppler FM continuous wave radar system, which realizes the static perception and human biological perception of human biological motion. Through the synchronization of human motion Doppler parameters and the synchronization of human physiological parameters, the wireless perception of the status of personnel in a specific place is realized, and the scene linkage is realized through the wireless signal notification gateway. The millimeter wave technology uses advanced radar-based presence detection algorithms, which can accurately detect Human body motion, even capturing subtle human motion, can determine the distance, speed and angle of people's fall, so the millimeter wave fall sensor has higher accuracy and speed in detecting fall motion.
