The fall protection lifeline system is a safety device system designed to provide continuous protection for operators in hazardous environments such as high-altitude work and confined space operations. It represents a comprehensive safety protection concept, primarily functioning to limit the fall distance of personnel in the event of a fall through its built-in braking and buffering mechanisms, thereby mitigating the injuries caused by the fall. This system comprises anchoring points, cables or guide rails, connecting components (such as safety ropes and carabiners), etc. Depending on the installation method, it can be classified into permanently installed systems (pre-installed) and temporarily installed systems (installed before the operation).
