According to our (Global Info Research) latest study, the global Fan Beam DEXA Bone Densitometer market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The main consumer markets of the Fan Beam DEXA Bone Densitometer are North America and Asia. With the gradual recovery of the global economy after the COVID-19 outbreak and the return of major economies to normal, the medical industry will see certain growth. More and more hospitals and clinics are able to carry out imaging tests. As a result, the demand for Fan Beam DEXA Bone Densitometer will increase in the foreseeable future.

The Fan Beam DEXA Bone Densitometer is a medical device that measures bone mineral density using a technique known as dual-energy X-ray absorptiometry (DEXA). The 'Fan Beam' refers to the type of X-ray beam used in the device, which is shaped like a fan. This beam rotates around the patient and captures images of the bones from different angles. The resulting images are used to calculate bone mineral density at various sites in the body, such as the spine, hip, and wrist. This type of DEXA machine is considered to be more precise than older machines because it uses a thinner X-ray beam and takes multiple measurements of the bone. It is commonly used to diagnose osteoporosis and monitor changes in bone density over time.
