According to our (Global Info Research) latest study, the global Fan-Out Packaging market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Fan-Out Packaging can be defined as any package with connections fanned-out of the chip surface, enabling more external I/Os. Conventional fan-out packages use an epoxy mold compound to fully embed the dies, rather than placing them upon a substrate or interposer. Fan-Out packaging typically involves dicing chips on a silicon wafer, and then very precisely positioning the known-good chips on a thin “reconstituted” or carrier wafer/panel, which is then molded and followed by a redistribution layer (RDL) atop the molded area (chip and fan-out area), and then forming solder balls on top.

The Global Info Research report includes an overview of the development of the Fan-Out Packaging industry chain, the market status of Consumer Electronics (Core Fan-Out Packaging, High-Density Fan-Out Packaging), Automobile Industry (Core Fan-Out Packaging, High-Density Fan-Out Packaging), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Fan-Out Packaging.
