Far Infrared (FIR) fabric is a type of textile that has been infused with ceramic particles or that emit far infrared radiation. Far infrared radiation is a type of invisible light that is commonly found in sunlight and is known to have several health benefits. When these ceramic particles or minerals are embedded into fabric, they can absorb the body's heat and then re-emit far infrared rays back into the body. This interaction the body can produce a number of positive effects, including improved blood circulation increased tissue oxygenation, enhanced metabolism, and reduced muscle soreness and stiffness.
