Abstracts

According to our (Global Info Research) latest study, the global Fan Convectors market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Fan convectors operate effectively at system water temperatures as low as 35°C. A standard domestic radiator is essentially designed to operate at much higher temperatures, around 70°C, and while it is theoretically possible to run them at lower temperatures, their performance and heat output is dramatically reduced and their physical size is substantially increased. To operate close to their optimum efficiency, heat pumps should be paired with modern fan convectors to minimise on running costs and carbon emissions.

The Global Info Research report includes an overview of the development of the Fan Convectors industry chain, the market status of Commercial Premises (Ceiling Mounted, Wall Mounted), Schools (Ceiling Mounted, Wall Mounted), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Fan Convectors.
