The global Far UVC Lamp market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Far-UVC lamps are a type of germicidal lamp that emit a specific wavelength of ultraviolet (UV) light that can kill bacteria and viruses, including those that cause the flu and COVID-19. These lamps use a specific wavelength of UV-C light (222 nanometers) that can safely penetrate human skin and eyes, but is still effective at killing germs. Far-UVC lamps are being studied as a potential tool to help reduce the spread of infectious diseases in public spaces like hospitals, schools, and transportation hubs. However, it's important to note that far-UVC lamps should be used with caution and according to recommended doses, as excessive UV exposure can also be harmful to human health.
