According to our (Global Info Research) latest study, the global Faraday Rotation Glass market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Faraday spun glass is a novel and important transparent optical functional material in the high-tech field of optoelectronics. It has good transmittance in the visible and infrared bands (520-1400nm). It can rotate the polarization plane of a beam of polarized light parallel to the direction of the magnetic field, and is a glass functional material with strong Faraday magneto-optic effect and Faraday effect. Because of its 'non-reciprocity', the polarization planes of forward incident light and reverse incident light of the same wavelength can be rotated in the same direction by the same angle, regardless of the direction of beam propagation. Based on the above characteristics, which is widely used to make Faraday rotators. Faraday rotator glass is more suitable for medium and low power lasers, and has lower cost compared with other magneto-optical crystals such as TGG and TSAG. TG20 is widely used in switches, modulators, sensors, magneto-optical isolators and other fields.
