According to World Agricultural Equipment, a new report from The QYResearch, sales of agricultural goods will climb at a healthy pace in most developing countries because of economic, population, and per capita calorie intake growth. These three trends will also facilitate the development of processed food and beverage industries in industrializing nations. As local demand for agricultural commodities increases, farmers will invest in new equipment and replace outdated machines in order to boost output, and increase the efficiency and productivity of their operations, causing mechanization rates in agriculture to rise. Furthermore, food producers will shift from using fairly basic equipment to larger and more powerful models as farm incomes rise and more farmers are able to gain access to the capital needed to invest in large-scale crop and animal production, adding to market value gains in industrializing nations. Through 2019, livestock machinery is projected to register the fastest growth of any major agricultural equipment product type. Freedonia projects that in many developed countries, a more favorable economic environment will lead to higher levels of meat, poultry, and dairy sales, which tend to be fairly expensive relative to other goods. To satisfy growing demand for their products at home, suppliers in industrialized nations will invest in a variety of new, more advanced livestock machinery. They will also benefit greatly from new meat, poultry, and dairy export sales opportunities in developing countries, where many more households will be able to afford these goods because of rising personal incomes.

SCOPE OF THE REPORT:

Farm equipment are mechanical devices such as tractors and several attached implements, which are intended to be utilized in diverse farming operations in order to

save time and labor. It is also known as Agricultural Equipment which involves all machineries which assist in the production of crops and agricultural livestock.
