## Abstracts

The global Farm Plastic Collection and Recycling Service market size is expected to reach \$ 7642 million by 2032, rising at a market growth of 8.3% CAGR during the forecast period (2026-2032).

Farm Plastic Collection and Recycling Service is a specialized agricultural waste management service that collects, cleans, sorts, processes, and recycles plastic waste generated from farming and agricultural activities. It turns used agricultural plastics into reusable raw materials (recycled plastic pellets or flakes), reducing environmental pollution and supporting a circular economy in agriculture.

The global farm plastic collection and recycling service market is a fast-growing, policy-driven segment of agricultural waste management, focused on collecting, cleaning, sorting, and reprocessing agricultural plastics (mulch films, greenhouse films, silage wraps, irrigation pipes, etc.) into recycled resin or secondary products. As of 2026, the market is defined by regional regulatory divergence, infrastructure gaps in emerging markets, and rising adoption of EPR (Extended Producer Responsibility) schemes.

The global farm plastic collection and recycling service market is a resilient, high-growth sector at the intersection of agriculture, waste management, and sustainability. While infrastructure gaps and economic challenges persist, EPR mandates and technological innovation will drive expansion through 2032. Leaders will be those that combine regulatory expertise, operational efficiency, and farmer-centric solutions to capture share in both mature and emerging markets.
