Fast-acting Nicotine Replacement Therapy (NRT) products are designed to provide quick relief from sudden nicotine cravings, aiding individuals in their efforts to quit smoking. These products deliver nicotine rapidly into the bloodstream, helping to alleviate withdrawal symptoms and reduce the urge to smoke. Common forms include nicotine gum, lozenges, mouth sprays, nasal sprays, and inhalers. They are often used in combination with long-acting NRTs, such as nicotine patches, which provide a steady level of nicotine throughout the day. This combination approach has been shown to be more effective than using a single form of NRT alone, as it addresses both the constant and sudden cravings associated with nicotine withdrawal.
