Abstracts

The global Fast Flow Fluid Warmer market size is expected to reach \$ 1502.3 million by 2029, rising at a market growth of 6.3% CAGR during the forecast period (2023-2029).

The increasing use of portable blood/IV warmers by hospitals, first responders, and the military to prevent hypothermia due to fluid delivery in hazardous field environments is expected to drive market expansion soon. Compared to non-portable blood/IV warmers, portable blood warmers require no external power source and typically weigh less than 1 kilogram including batteries and any additional accessories, making them suitable for on-site use by EMS providers. Hypothermia is one of the leading causes of death in victims of physical trauma, and epidemics, harsh environmental conditions, blood loss from injury/shock, physical trauma, natural disasters, and transfusions of refrigerated blood/intravenous injections may cause hypothermia and increase Death opportunities, which is expected to boost market growth.

The use of a fast flow fluid warmer is a viable practice for infusion of whole blood products to prevent transfusion-related hyperthermia. Patients with acute blood loss or anemia are prone to hypothermia, which can lead to coagulation disorders, requiring rapid infusion sets to deliver warm blood and other crystalloids in the event of trauma or blood loss during surgery.
