In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Fast Fusing Plasticizer is a plasticizer specially used to increase the plasticization rate of polymers. It has the characteristics of rapid fusion and dispersion, and is particularly suitable for the processing of materials such as polyvinyl chloride (PVC). Fast fusing plasticizers can quickly enter the polymer matrix at a lower temperature, thereby shortening the processing time, reducing production energy consumption, and improving the flexibility and tensile properties of the material. This type of plasticizer not only improves production efficiency, but also reduces polymer degradation caused by long-term high-temperature processing.
