According to our (Global Info Research) latest study, the global Fast Protein Liquid Chromatography (FPLC) market size was valued at US\$ 371 million in 2025 and is forecast to a readjusted size of US\$ 579 million by 2032 with a CAGR of 6.6% during review period.

Fast protein liquid chromatography (FPLC) is a type of liquid chromatography that provides high resolution by small-diameter stationary phases for protein characterization and separation. The technique features high loading capacity, biocompatible buffer systems, fast flow rates, and stationary phases for common chromatography modes (e.g., gel filtration, ion exchange, reversed phase, and affinity chromatography). The system enables reproducible separation by incorporating a high level of automation including samplers, gradient program control, and peak collection. FPLC allows the users to monitor several parameters at a time such as UV level, pH, and conductance and it allows for multiple columns to be run in tandem; therefore, minimizing the time needed to isolate pure protein. The method is applicable to proteins as well as other kinds of biological samples including oligonucleotides and plasmids.
