According to our (Global Info Research) latest study, the global Fatty Acids market size was valued at USD 11730 million in 2023 and is forecast to a readjusted size of USD 15880 million by 2030 with a CAGR of 4.4% during review period.

Fatty acids are important component of lipids (fat-soluble components of living cells) in plants, animals, and microorganisms. Generally, a fatty acid consists of a straight chain of an even number of carbon atoms, with hydrogen atoms along the length of the chain and at one end of the chain and a carboxyl group (COOH) at the other end. It is this carboxyl group that makes it an acid (carboxylic acid). If the carbon-to-carbon bonds are all single, the acid is saturated; if any of the bonds is double or triple, the acid is unsaturated and is more reactive. A few fatty acids have branched chains; others contain ring structures (e.g., prostaglandins). Fatty acids are not found in a free state in nature; commonly they exist in combination with the alcohol glycerol in the form of triglyceride.

The key players of fatty acids include Emery Oleochemicals, IOI, Wilmar, KLK, etc. The top 5 players account for approximately 35% of the total market. Indonesia is the largest market accounting for about 28%, followed by Malaysia and China. In terms of type, saturated fatty acids is the largest segment, with a share about 70%.
