## Abstracts

According to our (Global Info Research) latest study, the global Fatty Acids market size was valued at US\$ 13720 million in 2024 and is forecast to a readjusted size of USD 18630 million by 2031 with a CAGR of 4.5% during review period.

Fatty acids are important component of lipids (fat-soluble components of living cells) in plants, animals, and microorganisms. Generally, a fatty acid consists of a straight chain of an even number of carbon atoms, with hydrogen atoms along the length of the chain and at one end of the chain and a carboxyl group ( $\text{COOH}$ ) at the other end. It is this carboxyl group that makes it an acid (carboxylic acid). If the carbon-to-carbon bonds are all single, the acid is saturated; if any of the bonds is double or triple, the acid is unsaturated and is more reactive. A few fatty acids have branched chains; others contain ring structures (e.g., prostaglandins). Fatty acids are not found in a free state in nature; commonly they exist in combination with the alcohol glycerol in the form of triglyceride.

Fatty acids are one of the main components of lipids. According to their chemical structures, they can be divided into two categories: saturated fatty acids and unsaturated fatty acids. Unsaturated fatty acids have received widespread attention due to their benefits to human health, such as lowering cholesterol and preventing cardiovascular diseases.

The key players of fatty acids include Emery Oleochemicals, IOI, Wilmar, KLK, etc. The top 5 players account for approximately 35% of the total market. Indonesia is the largest market accounting for about 28%, followed by Malaysia and China. In terms of type, saturated fatty acids is the largest segment, with a share about 70%. In terms of application, the largest segment is soap & detergent, followed by fatty amine and fatty

amide.

## Market Trends and Prospects

**Improved health awareness:** As people's health awareness increases, the demand for healthy fatty acids such as unsaturated fatty acids will continue to grow. This will promote the further development of the fatty acid market.

**Technological innovation:** Technological innovation is an important factor in promoting the development of the fatty acid market. By improving production processes, improving product quality and reducing costs, companies can gain greater competitive advantages in the market.

**Sustainable development:** With the global emphasis on sustainable development, the fatty acid industry is also actively exploring sustainable production methods. For example, the use of renewable raw materials such as waste cooking oil to produce fatty acids can not only help reduce environmental pollution, but also bring new development opportunities to companies.
