The global Faucet-Mount Water Filtration System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A faucet-mount water filtration system is a type of point-of-use (POU) water filtration system that is designed to be mounted directly onto a faucet. These systems are compact, convenient and affordable compared to other types of water filtration systems. They are also easy to install and maintain, typically requiring only a few minutes to set up. Faucet-mount water filtration systems typically use a combination of activated carbon filters and other filtration media to remove contaminants such as chlorine, sediment, and microorganisms. They are able to provide clean and safe drinking water on demand, making them ideal for use in households and workplaces where a continuous supply of purified water is required.
