The global FBT Polarization Maintaining Coupler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The main features of FBT polarization maintaining couplers include: maintaining the polarization state of the optical signal, flexible design, low insertion loss, high durability and stability, and wide wavelength range. FBT polarization maintaining couplers are widely used in applications that maintain the polarization state of optical signals and play an important role in optical equipment.

The FBT polarization maintaining coupler is a commonly used optical fiber coupler, used to couple optical signals from one optical fiber to another optical fiber, and can maintain the polarization state of the optical signal unchanged. The FBT polarization maintaining coupler adopts the principle of beam splitting and recombination, and realizes the transmission and coupling of optical signals through the separation and recombination of optical fibers in the core.
