Abstracts

According to our (Global Info Research) latest study, the global FC BGA market size was valued at US\$ 5867 million in 2025 and is forecast to a readjusted size of US\$ 11060 million by 2032 with a CAGR of 9.6% during review period.

Flip Chip Ball Grid Array is a mid-cost, high-performance, semiconductor packaging solution that utilizes the controlled collapse chip connection technology, also known as flip chip, for its die to substrate interconnection. FC BGA provides the design flexibility for much higher signal density and functionality into a smaller die and packaging footprint. FC BGA packaging is attractive where performance is more important than cost. Flip-chip BGA packages can be mounted using standard printed circuit boards and can be replaced using existing standard repair practices.

The ABF (Ajinomoto Build-up Film) substrate consists of multiple layers of microcircuits, known as a 'build-up substrate' which allows the formation of these miniature components as its surface is receptive to laser processing and direct copper plating. Most modern chipmakers use ABF to design the smaller components of their CPUs and GPUs.

Global key players of FC BGA Substrate include Unimicron, Ibiden, AT&S, Nan Ya PCB, Shinko Electric Industries, etc. The top five players hold a share about 74%. China Taiwan is the world's largest market for FC BGA Substrate and holds a share about 30%, followed by China mainland and South Korea, with share about 17% and 17%, separately. In terms of product type, 4-8 Layers ABF Substrate is the largest segment, accounting for a share about 69%. In terms of application, PCs is the largest field with a share about 40 percent.
