Abstracts

According to our (Global Info Research) latest study, the global FC Juice market size was valued at US\$ 132 million in 2025 and is forecast to a readjusted size of US\$ 262 million by 2032 with a CAGR of 8.7% during review period.

In 2025, global FC Juice production reached approximately 83,128 tons , with an average global market price of around US\$ 1542 per ton. Gross margin is about 48%. The cost is 802 usd. The Production Capacity is about 100,000 tons. FC Juices are mainly made from fresh fruit. Fruit juice concentrates are made by filtering water from the pulp. Stored under aseptic, non-sterile and frozen conditions, these methods have historically been used to optimise its transport around the globe, and then reconstituted with the same volume of water evaporated from it once it reaches the place where the juice was produced. Fruit juice concentrate still accounts for the majority of juice in the market due to the cost advantages of its transport.

1. **Increasing Demand for Affordable Juice Products:** FC juice will continue to maintain strong demand due to its cost efficiency, long shelf life, and stable supply chain, especially in emerging markets where consumers seek affordable packaged beverages.
2. **Product Innovation and Flavor Diversification:** Manufacturers are expanding product portfolios through new fruit blends, functional ingredients, and reduced-sugar formulations to meet changing consumer preferences and health trends.
3. **Improvements in Processing and Sustainability:** Advances in concentration technology, energy-efficient processing, and sustainable packaging are helping producers improve product quality while reducing environmental impact and production costs.
