Abstracts

According to our (Global Info Research) latest study, the global Fe-based Superalloy market size was valued at USD 1957.5 million in 2023 and is forecast to a readjusted size of USD 2433.4 million by 2030 with a CAGR of 3.2% during review period.

Iron-based superalloys are characterized by high temperature as well as room-temperature strength and resistance to creep, oxidation, corrosion, and wear. Wear resistance increases with carbon content. Maximum wear resistance is obtained in alloys 611, 612, and 613, which are used in high-temperature aircraft bearings and machinery parts subjected to sliding contact. Oxidation resistance increases with chromium content. The martensitic chromium steels, particularly alloy 616, are used for steam-turbine blades.
