Abstracts

According to our (Global Info Research) latest study, the global Fe-NTA Phosphopeptide Enrichment Kits market size was valued at US$ 32.93 million in 2025 and is forecast to a readjusted size of US$ 66.18 million by 2032 with a CAGR of 10.2% during review period.

The Fe-NTA phosphopeptide enrichment kit is an IMAC-like sample preparation consumable centered on iron ion-loaded NTA chelating groups. It typically consists of Fe-NTA agarose or magnetic agarose, spin columns/magnetic beads/plate consumables, and binding, washing, and elution buffers. It is used to selectively capture phosphorylated peptides from proteolytic or fractionated peptides, which are then analyzed by LC-MS/MS for phosphorylation site identification and quantification. The overall gross margin is approximately 62%.

The Fe-NTA phosphopeptide enrichment kit occupies a small but high-value segment in proteomics sample preparation. Its market size is far smaller than that of mass spectrometers and general protein sample preparation reagents, but it has strong repurchase potential. Demand mainly comes from three sources: pharmaceutical target research, CRO phosphoproteomics service platforms, and translational research laboratories in universities and hospitals.

Growth drivers include: (1) increased TMT, DIA, and low-input phosphoproteomics experiments requiring more stable enrichment steps; (2) magnetic bead and 96-well plate formats that improve automation throughput, suitable for magnetic separation platforms like KingFisher; (3) clinical samples, tissue sections, and biofluid studies driving development of low-sample-volume methods. Fe-NTA is not a complete

substitute for TiO? and is often used as a complementary method in practice.

The competitive landscape is relatively concentrated. Thermo Fisher holds advantages in complete kits and mass spectrometry workflow integration, while Cell Signaling, Cube Biotech, and a few specialized proteomics consumable vendors cover magnetic bead and resin-based products. In the mid-term, the core drivers are increased usage frequency due to automation, batch processing, and more translational research projects.
